POWER PANEL SFX135 SOLAR MODULE

EXTREMELY ROBUST WITH ETFE COATING

135 WATT	EXTREME ROBUST	FIBER-GLASS CARRIER-PLATE	SUN POWER CELLS	ETFE-COVERED	6 m CABLE 2x 2,5 mm²
-----------------	-----------------------	----------------------------------	------------------------	---------------------	--

- Very resistant thanks to ETFE front and back foil with welded outer edges
- SUNPOWER high performance cells
- Compact connection box
- 6 m cable (2 x 2.5 mm²) pre-installed

The 135 W Power Panel SFX135 is a semi-flexible solar module with a new material composition. The SUNPOWER high-performance cells are mounted on a stable, black fiberglass carrier plate, which is covered by an extremely resistant ETFE layer. This ETFE film is on both the front and back of the module and is welded together at the edge.

This design ensures optimal protection of the internal cells and makes the Power Panel SFX135 extremely robust against scratches, heat, high humidity as well as sea and salt water.

POWER PANEL FLEX SOLAR MODULES

- ETFE SURFACE
- FIBERGLASS OR TPT CARRIER PLATE
- SUN POWER CELLS
- ONLY 3 mm THICK
- INCL. CABLE 2x 2,5 mm²

- Sunpower cells: Significant increase in electricity yield even if angle to sun is not optimal
- Approx. 5x lighter than conventional modules
- Compact connection box
- Solar cable (2 x 2.5 mm²) pre-installed
- Compatible with solar controllers from CARBEST or VOTRONIC
- Also ideal for maritime use

The solar modules deliver more power than conventional PV modules of the same size. Thanks to high-quality ETFE surface with honeycomb structure, there is significant performance increase in twilight/cloudy conditions.

Especially at high temperatures, the performance is significantly higher than comparable modules. This means maximum efficiency without any loss of performance.

Material top layer:

ETFE: Very hard & thin (app. 0.025 mm) material with high light transmission of app. 95%. Heat resistant up to app. 150°C. Very high weather resistance, also suitable for salt water.

Material carrier plate:

TPT: Material with high bending capacity. More flexible than fiberglass.

Fiberglass: Very strong, hard material for the best possible protection of the solar cells.

HEAT-FUNCTION **M8 THREAD**

How heating function works: internal BMS continuously monitors ambient temperature of battery & controls integrated heating function fully automatically. If a temperature $\leq 0^{\circ}\text{C}$ is measured during the charging process, BMS immediately stops battery charging & simultaneously activates the heating function of the battery. After reaching $+5^{\circ}\text{C}$, the charging process continues automatically. If the temperature rises above 10°C , the heating function is deactivated again.

LONG LIFE DEEP-CYCLE AGM BATTERIES

12V
LONG LIFE DEEP-CYCLE
MAINTENANCE FREE
COMPACT DESIGN

- Maintenance-free service battery for campervans and motorhomes
- High vibration resistance and leak proof
- Position-independent installation possible
- High cycle stability, also ideal for use in combination with a solar system
- Low self discharge

CARBEST AGM batteries have been specially developed for use in motorhomes. Thanks to AGM technology (Absorbent Glass Mat), the batteries are completely maintenance-free. The batteries can be installed vertically or horizontally (not upside down, with the battery terminals facing downwards). The T100 battery can be installed under the front seat in Volkswagen T5/T6 and Fiat Ducato.

The high vibration resistance, very good cycle stability and low self-discharge make the batteries the perfect energy storage for campervans and motorhomes. Thanks to their compact dimensions, they fit into common battery compartments or storage compartments. AGM batteries are frost-proof up to a temperature of -40°C.

Which battery to use? Normal starter batteries are not designed for cyclic stress and are not recommended as on-board batteries. Cycle-resistant batteries are suitable for the stress that occur during discharge/charge operation. A distinction is made between batteries with bound electrolyte in gel or AGM design, classic liquid/acid batteries and LiFePO4.

Gel, AGM and LiFePO4 batteries are leak-proof and absolutely maintenance-free over the complete service life. All battery types achieve high cycle stability under the required charging conditions.

Gel batteries can also be discharged very deeply for a short time, always provided that they are immediately recharged.

AGM batteries have a slightly higher performance for same box size & can also cope with very high charge/discharge currents in short term.

Batteries in LiFePO4 version (see previous pages) are lightest energy storage devices with highest energy density. The price is far higher, but this is somewhat offset by the longer service life that can be expected with the existing infrastructure.

The service life of a battery is measured in charge cycles. 1 charge cycle means: 1 x discharge, 1 x charge. In this case, the smaller the amount of energy extracted (in percentage terms), the longer the service life. At a maximum discharge of 30% app. 1200 charging cycles. If it is always discharged by 50%, the life is reduced to about 500 cycles. With classic starter batteries (lead / acid), this difference is much greater. (After installation or before winter storage min. 24 h charging.)

Notes on battery disposal:

You are required by law to return old batteries and accumulators. You can do this free of charge in a retail store or at another collection point near you. Addresses of suitable collection points can be obtained from your city or local government. Symbol of crossed-out trash can on batteries or accumulators indicates that they must not be disposed of with household waste. Respective chemical symbol (Hg, Cd or Pb) below the symbol of the crossed-out dustbin indicates that batteries or accumulators contain mercury, cadmium or lead. Further information can also be found on the Internet at <https://www.batteriegesezt.de/>

BATTERY CHARGE BOOSTER 25 A 40 A WITH INTEGRATED 18 A REFRIGERATOR OUTPUT

12V 25 A / 40 A 18 A REFRIGERATOR OUTPUT LEAD ACID AGM GEL LITHIUM IUoU CHARGING CHARACTERISTICS EURO 5/6 ECE R10

- Charging characteristic: IUoU
- For vehicles with intelligent alternator (Euro 6 suitable)
- Operation with / without D+ signal
- Built-in fuses (B1, B2 and refrigerator)
- Uncomplicated plug & play installation

The battery charging boosters from CARBEST with 25A or 40A power charge your on-board or secondary battery quickly and reliably while driving.

The IUoU charging characteristic supplies battery with constant current & voltage matched to it. After reaching charging end voltage, the changeover to float charge takes place.

This compensates for the self-discharge of the battery.

Via the special, integrated 18A refrigerator output, an absorber or compressor refrigerator can be supplied directly from the charge booster with power.

When the engine is running and/or the starter battery B1 is relatively charged, the output of the refrigerator is fed directly from B1. When the engine is at standstill and/or the starter battery B1 is relatively low charged, the output of the refrigerator is switched off or fed by B2, depending on the setting of DIP switch No. 3.

Operating temperature range: +10°C to +50°C. Integrated undervoltage and overvoltage protection as well as reverse polarity protection.

For the installation of safety glass windows we recommend:

① Activator 205, for cleaning the adhesive surface

Solvent-based, colourless adhesive cleaner for cleaning adhesive surfaces in combination with Sika adhesives/sealants. 30 ml GP 43.17/100 ml
294100 12,95
 Hazard: H225, H319, H336

② SikaTack DRIVE adhesive set, for bonding the window

Pane adhesive set for bonding safety glass panes. 1-2 sets are needed for the installation of a vehicle window. Set contents: 1x SikaTack DRIVE Purform (300 ml cartridge), 1x SikaPrimer-507 (30ml), 2x Sika Cleaner Pad, 1x applicator nozzle.
 Danger: H334
294842 42,90

③ Edge cover profile

Cutting out the sheet metal often results in an unsightly cut edge. This can be concealed with the edge protection profile. Please check during installation whether the pane can still be glued in correctly.

Small clamping range: 0.5-1.5 mm

5 m, black 294559 14,90 GP* 2,98/ 1m
10 m, black 294551 29,90 GP* 2,99/ 1 m

Large clamping range: 1.5-4.0 mm

10 m, black 294560 79,90 GP* 7,99/ 1 m

The bonding surfaces must be stable to take a load and free of dust, adhesive and grease-free.

- Individual luminaire construction for atmospheric lighting
- Profile length: 1.5 m, suitable for LED flex strips with a maximum width of 10 mm
- All aluminum profiles incl. 2 end caps
- Suitable for the Carbest LED flexbands
- Perfect combination with furniture panels and furniture parts

The aluminum profiles are a professional solution for laying LED strips. You can easily create your own lighting with the profiles and LED strips on the right.

The profiles are also ideal for use in furniture construction, e.g. to conceal transition between different wooden panels or to provide stylish lighting. This specifically illuminates corners and areas under cabinets and shelves. When it comes to light diffusion, you can choose between semi-transparent satin cover or opal version with a white appearance.

Each set comes with 2 end caps, which you can extend with additional end caps. Suitable for LED strips with a maximum width of 10 mm.

All aluminum profiles are supplied WITHOUT LED flex bands.
